

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

Applicant: Julie Straub, Howard Bernstein, Donald E. Chickering, III, Sarwat Khattak, and Greg Randall

Serial No.: 09/706,045

Art Unit: 1617

Filed: November 3, 2000

Examiner: E. Webman

For: *POROUS DRUG MATRICES AND METHODS OF MANUFACTURE THEREOF*

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

DECLARATION UNDER 37 C.F.R. § 1.131

Sir:

We, Julie Straub and Howard Bernstein, hereby declare that:

1. We are co-inventors of the above-identified application.
2. We conceived of and reduced to practice a method of forming microparticles that contain a diagnostic agent, which was subsequently described in U.S. Patent No. 6,565,885 to Tarara et al. This method involves spray drying a feed stock containing the diagnostic agent, a surfactant and a blowing agent. We conceived of and reduced to practice this method prior to September 29, 1997, as demonstrated by the attached copies of pages from a laboratory notebook (Exhibit A).

3. As noted in Exhibit A, the feed stock to the spray drying apparatus contained ammonium acetate, lecithin, (poly(ethylene glycol)-co-poly(lactide-co-glycolide) (75:25), D,L-

poly(lactide), and air. This composition was emulsified using a VirTis homogenizer to form an emulsion, which was then spray dried using a small-scale lab spray dryer (see Exhibit A, page 14). The resulting microparticles had diameters ranging from 1-20 microns and were hollow with internal central-like voids containing the air bubble, as demonstrated by transmission electron microscopy (see Exhibit A, page 116). These microparticles were echogenic (see Exhibit A, page 105, injection 7).

4. I declare that all statements made herein of my own knowledge and belief are true and that all statements made on information and belief are believed to be true, and further, that the statements are made with the knowledge that willful false statements are punishable by fine or imprisonment, or both, under section 1001 of Title 18 of the United States Code, and that such willful false statements may jeopardize the validity of the application or any patent issuing thereon.

BOOK NO.

Investigator: H. B. Smith Date: 8/29/95
Notebook page #: 51526H Micrograph lot #: 51526HMicrograph Production
Process Room ConditionsRoom Temp: 22°C
Room Humidity: 51.5% RH

Polymer Preparation

Polymer type 1: PEG-PLGA
Source & Lot no.: BPE Lot # 204-14-14
Mass (g): 3.65 g
Polymer type 2: PLGA
Source & Lot no.: BPE Lot # 21038
Mass (g): 3.61 g
Solvent Type: MeOH
Source & Lot no.: EM Lot no 87068
Volume: 280 mL
Surfactant Type: Lecithin
Surfactant Conc: 50 mg
Dissolution Media: MeOH
Dissolution Temp: Room temperature
Dissolution Time: 4 Hrs
Exhausted: No
Source & Lot no.: H2O BX
Amount, g/L: 2.00 g

Comments:
Similar common weight in water as follows:
10 g in 4 mL of H₂O. Added to polymer solution.

Aeration Methodology

Comication: None
Vessel type: None
Frequency: None
Power: None
Temperature: None
Time: None
Time until spray: None
Spraying: None
Gas type: None
Gas pressure: None
Temperature: None
Time: None
Time until spray: None
Homogenization: VITEC
Blade type: MSC-2000-100 generator
Time: 10 minutes
Speed: 20,000 RPM
Temperature: 20°C
Time until spray: 10 minutes
Comments:

Spray Conditions

Chamber Temp: Room temperature
Nozzle type: 0.7 mm standard nozzle
Gas Pressure: 90 psi
Gas Flow rate: 600 L/H
Orifice type: No orifice grade
Feed Pressure: 112 psi
Inlet Temp: 50°C
Start Time: 1:16
Flash Time: 1:18
Mass Recovered: 163-171 = 167
Yield (g): 2.76

Process Conditions

	Run 1/2	Run 1/2	Flash
Chamber Temp:	22°C	22°C	22°C
Flow Pressure:	100-101	100-101	100-101

Comments:
Did not get 2nd tube as I had done of 2 previous tubes.

Drying Methodology

Type: Ventilation VITEC
Total dry time: 24 Hrs
Mass recovered: 163-171 = 167
Yield (g): 2.76
Comments:
100% in 24 Hrs in 100% humidity at 22°C
Mass recovered 163-171. Placed back on 24 Hrs
Dried from 100% humidity at 22°C, 24 Hrs.

Drying Methodology

Room Temp: None
Room Humidity: None
Drying Time: None
Spraying: None
Spray type: None
Product recovery: None
Yield (g): None
Comments:

NOTE: [REDACTED]

Accuracy

Notes

All samples will be prepared by vortexing and sonication.

All samples will be prepared in 20 mL centrifuge vials. Empty 20 mL centrifuge vials will be brought.

Sodium (0.9%) will be used instead of water for the bulk stream in the pumping system. Preweighed packets of 16.2 g of NaCl will be brought out, and added to 1800 mL water in a bucket. Two each bucket will be sent to TRL. A total of 20 packets will be brought.

Vehicle 1 = 0.5% Pwoca 20, 5% glycerol ← reversed

Vehicle 2 = 0.5% F127, 5% glycerol, washed

- 1) System essentially same as [REDACTED] as per unit, except some saline in buffer
- 2) Vehicle 2 (VF) was used
- 3) Yungui Wu did the entire study
- 4) After injection of sample, sample was stirred, flow rate was then increased to 500-800 mL/min until echogenic material detected by the oscilloscope. Flow rate then dropped to 100-200 mL/min.
- 5) The later window moved dramatically with each pulse
- 6) Tubing was manipulated to remove bubbles. At least once (prior to injection 9) this resulted in change of alignment. Also that one detected later, the transducer was reattached.
- 7) Cleaning procedures: (1) water pumped to remove all material, then saline pumped. (2) water pumped, saline pumped in (3) water pumped, saline pumped through.

(2) System pumped by, saline pumped in
